“New Dimension to Health Care”

About Hospidesign

Hospidesign provides integrated package for organizing and managing health services to the extent that the people get the proper care they need, in ways that are user friendly, achieve the desired results & provide more value for their money thus making Hospidesign a one point solution for all hospital related matters which also makes Hospidesign different from others.

The scope of work mainly covers:

- ✚ Clinics, Polyclinics, Nursing Homes, Diagnostic Centers, Blood Banks.
- ✚ Green field project like new and upcoming small to large size hospitals of single or multi specialty.
- ✚ Brown field projects like renovation, expansion, relocation of existing hospitals.
- ✚ Hospital Project Management, Hospital Management, Mergers & acquisitions.
- ✚ Guiding hospitals to get through the process of accreditation and ISO certifications.

The Team

✚ Our high quality of consultancy is supported by a well qualified & experienced team, which consists of specialists and experts in their respective fields.

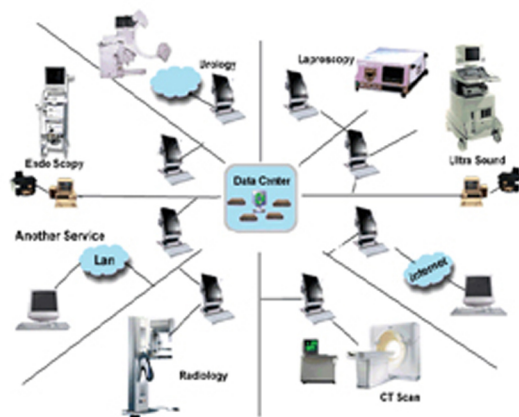

✚ Our team members have educational, professional, and consulting experience in diverse areas like Finance & Accounts, Administration, Marketing & Market Research, Medicine, Architecture, Business Development, Information Systems, and Economics.

✚ Hospital planning & designing is teamwork. Each project is staffed by consultants whose expertise matches the client's needs. All projects are supported by analysts, computer specialists and an extensive health care library.

Our Services

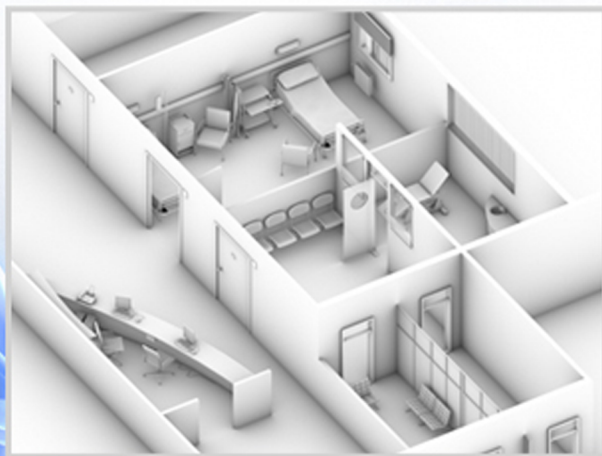

Materials Management

Health care organizations use large quantities of supplies and material in providing services to patients. These include drugs and pharmaceuticals, medical supplies, emergency blood supplies, food, office supplies and parts for equipment repair and maintenance.

Simultaneous activities of Hospidesign

- Liaison with: Architects / contractors / equipment vendors / utility service consultants.
- Liaison with electrical, civil, plumbing consultants and engineers.
- On site supervision while the structure is under construction.
- Guidance and supervision of electrical wiring in various departments, plumbing facilities, planning UPS requirements of the departments etc.
- Hospidesign provides three optional layouts of the project. The construction is carried out as per the layout selected by the user. The user can also suggest modifications in the layouts as per his/her requirement.

Our Services

Strategic / Facility master planning

- Demographic study of the particular location.
- Health care needs in that area.
- Study of socioeconomic & health care characteristics.
- SWOT analysis of competitors.
- Financial feasibility.
- Building & site limitation.

Thus Hospidesign provides total solutions in Hospital management, Systems Development and Systems Management.

Hospital Designing

- Our team will conduct selection of technical, scientific medical equipment with careful analysis of each departmental need's as per the specifications and organize purchase of medical equipment of best quality and cost-effective equipment as per the time bound requirements of the project.

Hospital Human Resources Management

Any hospital, which provides direct services to the community, needs good human resource! Therefore a lot of caution must be exercised at the entry point itself. Getting the right person for the right job, with the right attitude is the need of the time.

Our Services

Selection of location

- Study of location is done (away from noise pollution, factory emitted fumes and vapors etc.) in different perspectives like accessibility to transportation, availability of public utilities, scope for future expansion, presence of proper sanitary & other civic utilities.
- Survey is done for the soil investigation & sub soil conditions.

Early planning

- Operational planning – in terms of services going to provide, bed strength, departments, equipments, space required, personnel, adjacencies etc.
- Functional planning, the departments in the hospital will be planned such that the patient and doctor can move in an orderly manner as per NABH/JCI standards as required by the client and also the market.

Project planning & building

Hospidesign will be providing with the line drawings after the architect submits the building outline and positions of staircase and lifts (if needed).

Our Services

Project Feasibility

- A Market survey will be carried out and feasibility report is prepared.
- Propose alternatives and business model options from which a suitable solution can be chosen (in subsequent phases).
- Study of required services and staff in the particular location of the proposed hospital.
- Propose the types of services to be provided - secondary care / tertiary care.
- Work out sophistication in Building Plans and Equipment.
- Projection of Investment on returns.
- Present / propose the potential of the planned institution.
- Point out the medical facilities that are lacking in the vicinity and the need for such facilities to be made available.
- Study and present the patient's migration pattern.
- Make reports on competition in the area around.

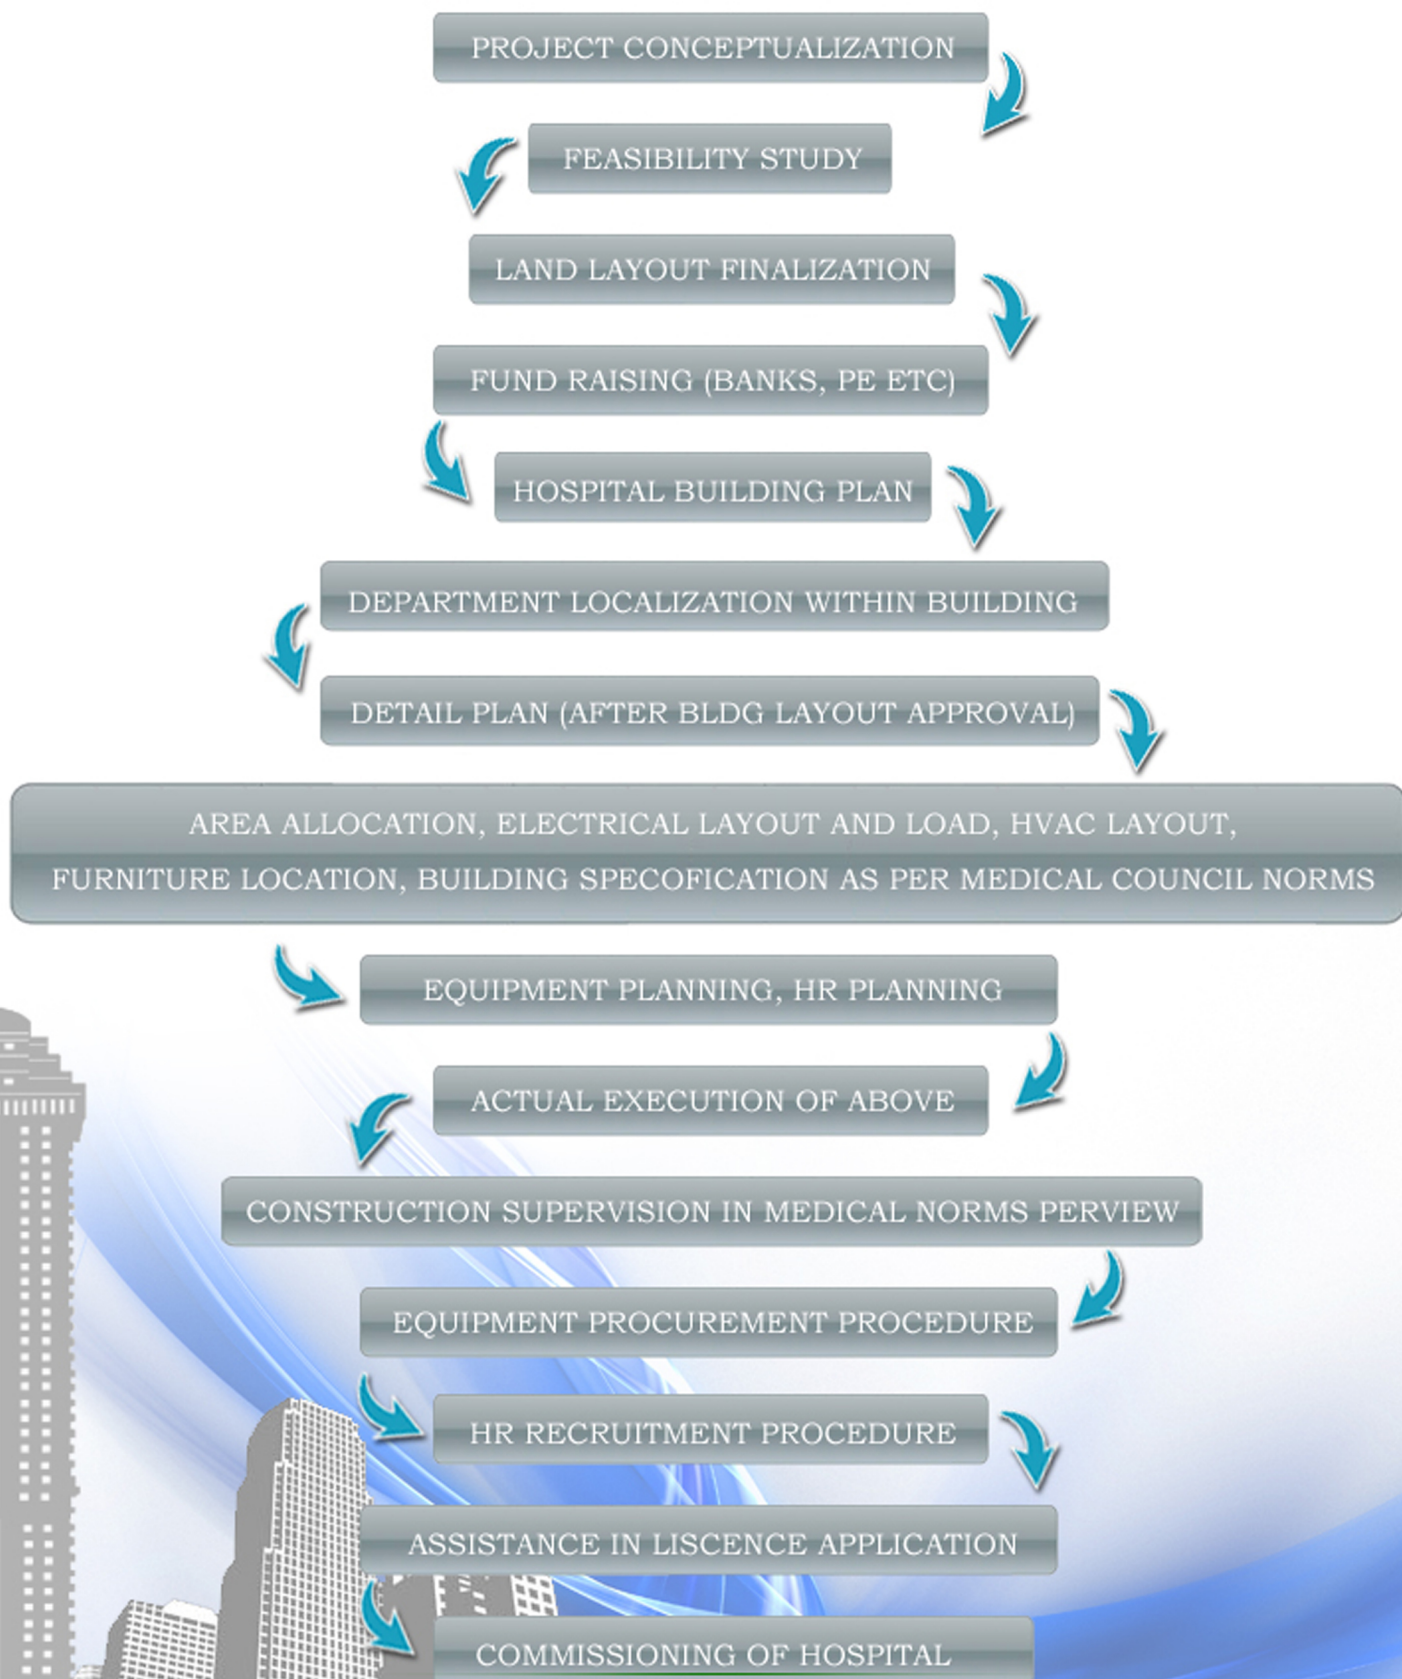

Financial planning:

Our qualified personnel can provide financial planning at three stages:

- Planning Stage: From commencement of planning to Commissioning of Operations.
- Operational Stage: Operational Stage & sale of services.
- Expansion Stage: Possible investment in future expansion plans.
